Web Window Manager WinLIKE 1.5 with Drag-and-Drop Desktop Features

The new version of the Window manager WinLIKE for web applications now supports cross window drag-and-drop of any HTML elements. For the first time in the history of the WWW, desktop features like drag-and-drop of icons, files, directory trees or visual editors are now available for browser based, platform-independent web applications.

Drag-and-drop is a fundamental feature of interactive graphical user interfaces, especially for use between several windows and the desktop. Now WinLIKE's new drag-and-drop feature provides the last desktop-limited capability to the new Web 2.0. Web developers can use the integrated API to easily utilize all WinLIKE features in order to design their own drag-and-drop applications: e.g. web portals, intranets, visual editors for content management and workflow systems, desktop replacement with drag-and-drop of files and folders, etc. The new feature can be tested online at winlike.net/go/?id=220806.

On September 28th, WinLIKE will officially be 3 years old. Since 2003 WinLIKE has established itself as the most stable and comprehensive window technology on the Web. It is used by thousands of users in professional and critical business services. WinLIKE is used mainly in North America, Europe and Asia - e.g. by large enterprises such as SONY, UNIVERSAL, BERTELSMANN, SIEMENS, ARD, ZDF, AT&T and RAYTHEON.

WinLIKE is extremely simple, adheres to HTML conventions, is only 27 kB in size and is 100% compatible with PHP, JSP, ASP.NET, AJAX and other programming languages and techniques. In addition, it makes the development of web pages and web applications much more efficient. The annoying differences between Internet Explorer and Netscape (Mozilla, Firefox etc.) are now a thing of the past.

WinLIKE is free for personal use and is available for commercial use for only \$80 per website. A developers license for unlimited commercial application usage costs \$1,890.

Additional information, screenshots and examples for WinLIKE are available at www.winlike.net or wiki.winlike.net and at contact@ceiton.com or +49 (341) 9135 830.

CEITON technologies, founded in 2000 in Germany, is a private software development and process consulting company. Along with WinLIKE, the company also developed a leading Workflow management system called Web Workflow PPS which uses WinLIKE as the user interface. The company usually supports high-tech companies around the world in the fields of media, software development, telecommunication, research and defense.
